EXAMINER'S REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The prior art of record fails to teach or suggest an arcuate cross-sectioned ridge/vent recess combination of features as a filter vent seal in a sterilization container, wherein an arcuate-shaped gasket is wholly contained in the recess and the arcuate vent recess is formed on the interior surface of a vent planar member that encloses the interior space of a sterilization container to provide a particulate and fluid tight vent filter seal, since the known vent filter seals were formed with no arcuate protective ridge that extends above the plane of the exterior surface of a vent planar member and completely surrounds a container vent (see Spence – U.S. Pat. No. 4783321, or Lorenz – U.S. Pat. No. 4551311, or Leibinger – U.S. Pat. No. 4512498). Other known vent filter seals for a sterilization container either features an arcuate vent recess formed on the exterior surface of the vent planar member, the recess extending above the plane of the exterior surface (see Williams – U.S. Pat. No. 4915913), or while the vent recess is formed on the interior surface of a vent planar member but does not enclose the interior space of a sterilization container (see Nalepa - U.S. Pat. No. 5968459), or includes a filter cover with an arcuate convex cover ridge for engagement with the vent planar member (see Nalepa - U.S. Pat. No. 5968459 and Schainholz - U.S. Pat. No. 4661326). Furthermore, none of known vent filter seals for a sterilization container appears to specifically teach a particulate and fluid tight vent filter seal comprising a gasket having a generally arcuate cross-section secured wholly within a vent recess.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
